

COMPANY OVERVIEW

Premier Lab Solutions

Learn more at
www.premierlabsolutions.com

Premier Lab Solutions (PLS) is an independent general laboratory specializing in molecular diagnostics, chemistry, toxicology, and COVID testing. Through innovation and technology, PLS is dedicated to improving health outcomes, increasing patient and provider satisfaction, and providing economic value. PLS prioritizes exceptional customer support and whether through collections, testing, or resulting, our operations are staffed and trained to meet the customers' needs with accountability, professionalism, and integrity.

Premier Lab Solutions offers a comprehensive test menu including specialty and general laboratory testing and is dedicated to becoming a superior clinical laboratory partner to providers to help serve and improve the health outcomes of patients.

COVID-19

Detection of the SARS-CoV-2 virus is available via Molecular PCR Swab, At-Home Saliva collection for Molecular PCR and with our High Efficiency Antigen Testing. We also offer targeted Protein Spike Antibody Testing to determine the quantitative level of antibodies still in a patient's system. All tests are effective for symptomatic and asymptomatic patients.

Respiratory Pathogen Panel

The Respiratory Pathogen Panel (RPP) currently involves simultaneous detection and identification of nucleic acids from a combination of 28 viral and bacterial pathogens collected from individuals with symptoms of a respiratory tract infection. This nasopharyngeal swab test is designated as an aid for adult and pediatric patients who are either hospitalized or admitted to an emergency department, or who are outpatients with suspected respiratory tract infection.

Toxicology

Drug testing is essential to safeguarding patients and communities through compliance-based medication monitoring. Using state-of-the-art instrumentation such as LC/MS/MS, our comprehensive drug panels are designed to detect the most common prescribed and illicit drugs and drug metabolites. Testing methods require minimal sample volume, virtually eliminating the need for specimen re-test due to insufficient quantity, enabling us to provide some of the fastest turnaround times in the business.

Hematology

Hematology offers a variety of blood and blood disorder testing to aid in the diagnosis of anemia, certain cancers of the blood, inflammatory diseases, types of bleeding and clotting disorders, as well as monitoring blood loss, infection and anticoagulation therapies. Complete blood counts (CBC) are performed using the latest technologies to provide clients with accurate and consistent results.

Candida Auris

With medication-resistant Candida Auris becoming a mounting problem in healthcare facilities and nursing homes, a white glove touch is needed to adequately respond. Early identification and screening of patients can stop the spread. We respond swiftly with instant mobilization and PCR for quick, accurate results.

Molecular and Microbiology

We offer first-class pathogen detection solutions using molecular diagnostics or complimentary microbiology and molecular diagnostics solutions to identify pathogens quickly and accurately. Microbiology and molecular diagnostics can be used in combination with UTI panels and Urine Cultures as well as in our blood culture testing. We also offer sexually transmitted infection, urinary tract infection, wound, respiratory, and women's health panels that can be combined with our antibiotic resistance panel, which helps to identify any pathogen resistance that would not show up on your typical antibiogram.

Chemistry

Chemistry panels are a group of tests that are routinely ordered to determine a person's general health status. They help evaluate, for example, the body's electrolyte balance and/or the status of several major body organs. Laboratories typically offer a Comprehensive Metabolic Panel (CMP) or Basic Metabolic Panel (BMP) with limited customization. We are equipped with a wide range of instrumentation, and our panels can be tailored to meet the needs of the health practitioner ordering the tests.

Immunochemistry and Infectious Disease Testing

Immunochemistry testing covers a wide variety of testing including therapeutic drug monitoring, PSA, thyroid and infectious disease testing with confirmation. Our infectious disease testing compliments our large microbiology and molecular testing menu by adding the capability of screening for HIV, Hepatitis A, Hepatitis B, Hepatitis C and Syphilis with confirmation testing available. Our infectious disease testing menu is designed to help you make more confident diagnostic and treatment decisions.

Mobile Phlebotomy

The ability to respond swiftly to a client's need is crucial. We have the mobility to perform services in a variety of different locations and venues, and our expert phlebotomists have superb bedside manner going the extra mile to provide care for patients.

Premier Lab Solutions is ready to serve you through one of our community labs located in Phoenix, Laguna Hills or Sacramento.

PMDLab - Sacramento
4630 Northgate Blvd #150
Sacramento, CA 95834
CLIA #05D0978885

PLS - Phoenix
3440 N 16th Street #200
Phoenix AZ 85016
CLIA #03D2122216

PMDCA - Laguna
23297 S Point Drive #100
Laguna Hills, CA 92653
CLIA #05D0864476
